

PDF Export Spec — Text / Space-Aligned Reports

Medicronis Sales Intelligence · PDF Export Specification · One page
Send to: Bukhari Traders MBD · Ch Medicine MWL · Globar Enterprises SKP · Mrwa Enterprises BWP · Noor Khan Mingora · The Hamza Traders Kasur

Why this matters

Applies to distributors whose PDF looks like a stock statement but is exported as **plain text lines** (spaces used to align columns), not a real table grid.

Current issue: No reliable table is detected. Automation falls back to fragile line reading, which breaks when product names have multiple words or blanks are missing.

Required columns (every month)

Product Name	Rate / TP	Opening Qty	Purchase Qty	Sales Qty	Sales Value	Closing Qty
--------------	-----------	-------------	--------------	-----------	-------------	-------------

Extra columns (bonus, transfer, pack size, etc.) are fine if labels are clear and stable. Opening / Purchase may be omitted only if Sales Qty, Sales Value, and Closing Qty are always present.

Please DO

- Export from ERP as a **tabular PDF** or print-to-PDF from Excel with a real table.
- Put **Rate/TP in its own column** (decimal), then Sales Qty, Sales Value, Closing Qty.
- Keep **one product per row**; wrap long names only inside the Product cell.
- Use **0** for empty quantities — avoid blank gaps between numbers.
- Keep the **same column order every month**.
- Ensure text is selectable (not a scanned image).

Please DO NOT

- Do not send a text “print report” that only looks aligned on screen.
- Do not put company titles or “Total Sale Value ...” as the only table on the page.
- Do not merge product name + pack size into the numeric columns.
- Do not change column order between months without notice.

Example — avoid vs prefer

Avoid (current style)	Prefer (reliable)
AMINAL SYP 120ML 90.00 55 0 4 360 0 0 51 4590 (spaces only — product and numbers run together when names vary)	Real table cells: Product: AMINAL SYP 120ML Rate: 90.00 Sales Qty: 4 Sales Value: 360 Closing: 51

Easiest alternative

If PDF layout cannot be changed, send the same data as **Excel (.xlsx)** with one header row and the columns above. Excel is fully supported and avoids PDF layout issues.
