

PDF Export Spec — Pipe-Delimited Text Tables

Medicronis Sales Intelligence · PDF Export Specification · One page
Send to: Zafar & Sons NWS

Why this matters

Applies when the PDF draws a “table” using **pipe characters (|)** in plain text, instead of real table cells or borders.
Current issue: Pipe characters are treated as text, not columns. Geometry and table extractors cannot split product vs qty reliably.

Required columns (every month)

Product Name	Rate / TP	Opening Qty	Purchase Qty	Sales Qty	Sales Value	Closing Qty
--------------	-----------	-------------	--------------	-----------	-------------	-------------

Extra columns (bonus, transfer, pack size, etc.) are fine if labels are clear and stable. Opening / Purchase may be omitted only if Sales Qty, Sales Value, and Closing Qty are always present.

Please DO

- Export a **real table** (PDF table object or Excel → PDF).
- Use separate cells for Product, Rate, Sales Qty, Sales Value, Closing Qty.
- Remove all | column separators from the body of the report.
- Keep headers on one row (or a clear two-row header) with stable labels.
- Prefer Excel (.xlsx) if the ERP only offers text/pipe reports.

Please DO NOT

- Do not format rows like: | Product | Rate | Qty | Value |
- Do not put pipes inside product names.
- Do not rely on monospace alignment alone.

Example — avoid vs prefer

Avoid (current style)	Prefer (reliable)
MEDICINE NAME RATE SALE QTY SALE VALUE CLOSING AMINAL SYP 90.00 4 360 51	Grid table (no pipes): Product Rate Sales Qty Sales Value Closing as real columns/cells — not ASCII art

Easiest alternative

If PDF layout cannot be changed, send the same data as **Excel (.xlsx)** with one header row and the columns above. Excel is fully supported and avoids PDF layout issues.
