

PDF Export Spec — Sr# Prefixed Product Lines

Medicronis Sales Intelligence · PDF Export Specification · One page
Send to: Life Care Distributor Gujrat

Why this matters

Applies when each product line starts with a **serial number (Sr#)** glued to the product name, and the PDF has little or no usable product table.

Current issue: Serial numbers mixed into the product field break matching. Summary-only “tables” (e.g. Total Sale Value) hide the product grid from automation.

Required columns (every month)

Product Name	Rate / TP	Opening Qty	Purchase Qty	Sales Qty	Sales Value	Closing Qty
--------------	-----------	-------------	--------------	-----------	-------------	-------------

Extra columns (bonus, transfer, pack size, etc.) are fine if labels are clear and stable. Opening / Purchase may be omitted only if Sales Qty, Sales Value, and Closing Qty are always present.

Please DO

- Export the **product grid** as the main table (not only totals).
- Use a dedicated **Sr#** column — never inside Product Name.
- Columns: Sr# | Product Name | Rate | Sales Qty | Sales Value | Closing Qty.
- One product per row; dashes for empty values should be replaced with **0**.
- Excel (.xlsx) with the same columns is preferred if PDF cannot change.

Please DO NOT

- Do not write lines like: **12 KhaajGo Lotion 60ml 110 5 550 ...**
- Do not put Sr# / “Medicine Name” only in a title row with data as free text.
- Do not export a page whose only detected table is Total Sale / Closing Stock Value.

Example — avoid vs prefer

Avoid (current style)	Prefer (reliable)
12 KhaajGo Lotion 60ml 110 5 550 20 (Sr# + product + numbers on one text line)	Sr#: 12 Product: KhaajGo Lotion 60ml Rate: 110 Sales Qty: 5 Sales Value: 550 Closing: 20 (separate columns)

Easiest alternative

If PDF layout cannot be changed, send the same data as **Excel (.xlsx)** with one header row and the columns above. Excel is fully supported and avoids PDF layout issues.
