

Secondary Sales Reporting Automation

Prepared for **Medicronis Pharmaceutical** | Prepared by **Mitrixis**

PDF and Excel distributor reports → matched sales facts → Secondary Sales Report (SSR) and management views — without converting PDFs into text files by hand.

1. The problem we solve

Medicronis already runs a sales and field-force platform (approximately PKR 70,000 per month) and a dedicated resource (approximately PKR 40,000 per month) to prepare secondary sales. That platform still requires **SSR data as text-file uploads**. Distributor PDFs arrive in many layouts. The gap is not field-force tracking — it is **reliable ingestion of messy distributor stock/sales PDFs** into clean, reviewable numbers the business can trust.

Mitrixis built a specialist layer for that gap: upload the PDF (or Excel), extract line items, match products, review exceptions, approve, and generate SSR and related reports from the same facts.

2. What you are buying

Phase 1 — Go-live (this proposal)

- Upload distributor **PDF and Excel** sales/stock statements.
- Automatic extraction across the July Closing format families already mapped (~45 distributors).
- Product matching against Medicronis product master, with a **human review queue** for exceptions.
- Approve into daily sales facts (month-to-date snapshots as received from distributors).
- **SSR** generated for a chosen date ("Updated Sales Till ..."); Excel download built on demand (not a stale file on disk).
- **Distributor Wise** and **Product Wise** monthly reports (filters: region, area, territory, zone, manager, group, product, distributor).
- Masters: distributors, products, groups, geo (zone/region/area/territory), managers, monthly product targets.
- Production hosting, one training session, and a 30-day defect warranty after go-live.
- User login. Role-based access (Admin / Operator / Viewer) to be completed as part of go-live hardening.

Not included in Phase 1 (quoted separately if required)

- Replacement of the existing field-force / mobile application.
- OCR for image-only / scanned PDFs (e.g. New Tawakal-style files).
- Unlimited new PDF layouts beyond a monthly support cap (see care plan).
- Full ERP, WhatsApp alerts, or a national BI warehouse.

3. Commercial offer — founding customer

This is Mitrixis' first production deployment of this product. Pricing is a **founding-customer package** for Medicronis: lower go-live investment in exchange for a live reference and a 12-month paid care term after the complimentary period.

Item	Amount	Notes
Go-live / setup (one-time)	PKR 400,000	Configuration, remaining hardening, deploy, training, 30-day warranty
Complimentary period	2 months	No monthly fee after go-live (as already agreed)
Care plan (from month 3)	PKR 45,000 / month	Hosting, backups, bugfix, up to 2 new/changed PDF layouts per month
Paid term after free period	12 months	Locks founding rate; extra layouts billed as change requests

Year-1 cash (if go-live in month 1): PKR 400,000 + (10 × 45,000 if ten paid months fall in the first calendar year) ≈ **PKR 850,000**, or PKR 400,000 + (12 × 45,000) = **PKR 940,000** over go-live + 12 paid months. Monthly care is less than the current field-force software bill and less than a second data-entry hire.

Payment schedule

Milestone	Amount	When
Kick-off	PKR 200,000 (50%)	On signed proposal / SOW
Go-live	PKR 200,000 (50%)	Production live + training completed
Care plan	PKR 45,000 / month	From the first day of month 3 after go-live

4. Why this is not a duplicate of your current software

	Current platform (~PKR 70k/mo)	Mitrixs SSR layer
Primary job	Field force, mobile, sales ops	Distributor PDF/Excel → trusted secondary sales
SSR input	Text-file upload	Native PDF / Excel + review
PDF layouts	Not the product	Mapped families + template wizard
Replace each other?	Keep it	Sits beside it — does not replace mobile

5. Operating model after go-live

The PKR 40,000 role does not disappear on day one. The job changes from **retyping PDFs** to **reviewing exceptions and generating reports**. Month-end SSR is produced from approved facts. New distributor layouts are handled under the care cap; beyond that, a small change request applies. Wrong secondary numbers cost more than cheap labour — they distort targets, stock, and distributor conversations.

6. Next step

Sign this proposal (or a short SOW attached). Mitrixs completes go-live hardening (authentication/roles, production, training). Complimentary care runs for two months. Monthly invoicing starts in month 3.

Valid for 30 days from the date on this document.
